ReceiptLedger

Mobile UI/UX Master Design Brief & Google Stitch Prompt Guide

Target: Flutter iOS & Android | Tool: Google Stitch & Figma | Output: Images / Mockups Only (No Code) | Style: Minimal Flat (No Gradients)

Clarification on "Warmth":
When we say warm, we do **NOT** mean yellowish or beige colors. **We mean human, approachable, friendly, and effortless to use.** Clean layouts that feel like a trusty personal pocket notebook rather than an intimidating corporate tax audit software or spreadsheet.

RULE #1: ABSOLUTELY ZERO GRADIENTS
Use pure, solid, deliberate flat colors. No color fades, multi-stop gradients, or glossy button highlights.

RULE #2: ZERO LIQUID GLASS / GLASSMORPHISM
No translucent floating frosted-glass cards, blur filters, or skeuomorphic plastic reflections. Use clean flat surfaces with crisp 1px to 1.5px outlines.

1. Deliverable #1: App Icon & Brand Logo (Top Priority)

The app icon will sit on user homescreens every day. It must be unique, memorable, and fun.

- **Tone:** Casual, playful, engaging, and minimal. Avoid stiff calculators, boring folders, or dry tax icons.
- **Motif Concepts:** A folded receipt paper slip with a friendly smile notch, a smiling tally mark, or an origami-like minimal paper roll.
- **Homescreen Impact:** High contrast, vector flat, instantly recognizable at 32×32px on any wallpaper, and stunning at 1024×1024px.

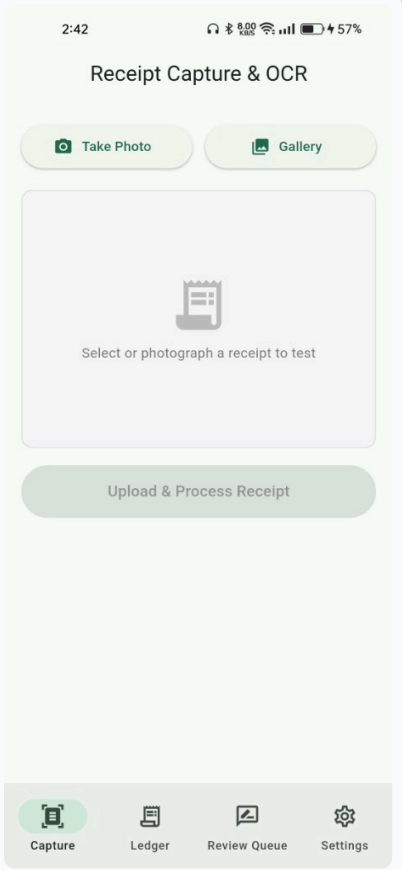

2. Deliverable #2: Secret Tucked-Away Profile Sidebar (Drawer)

Keep the main screen clean by tucking profile and settings into a sleek slide-out drawer:

- **Trigger:** Slides out smoothly when the user taps their **circular avatar** in the top-right corner of the app bar.
- **User Profile Header:** Avatar photo, full name (*Asad Khan*), email (*user@receiptledger.com*), and a clean status badge (*Pro / Local Ledger*).
- **Menu Options:** Profile Settings, Export Ledger (CSV/PDF), Theme Selector (Light / Dark / High-Contrast B&W), and About ReceiptLedger (version & licenses).
- **Log Out:** Distinct clean logout button with a subtle red accent at the very bottom of the drawer.

3. Current Barebones Screens & Critique (What Needs Improvement)

Here are the real screenshots of the current working Flutter application. Use these as functional blueprints to redesign into modern, high-fidelity mockups:

Screen 1: Receipt Capture

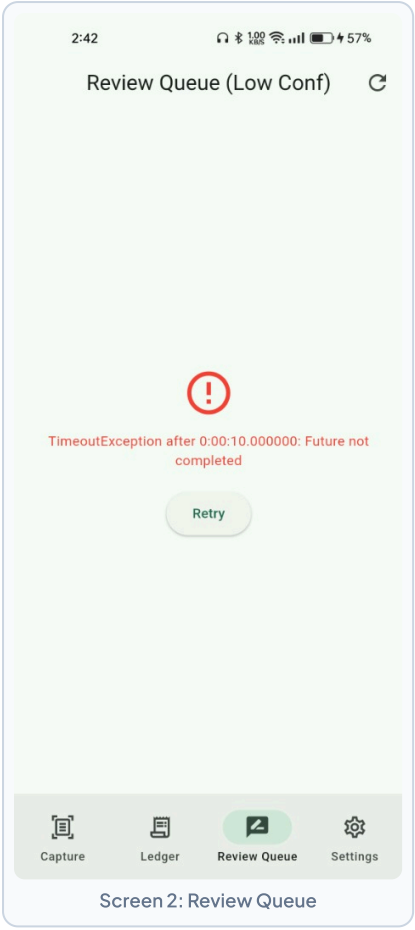

1. Receipt Capture & Scan Screen

What's Wrong Currently:

- Two tiny disconnected buttons ('Take Photo' & 'Gallery') float awkwardly at the top.
- An unappealing empty gray placeholder box in the center.
- The 'Upload & Process Receipt' button is a dead gray slab at the bottom.

Redesign Wishlist:

- Prominent, inviting camera viewfinder card with receipt corner framing marks.
- Pill switch toggle for [Single Receipt | Batch Scan Mode].
- Large tactile shutter button for camera, plus quick gallery picker.
- Subtle status badge showing active engine: *Gemini AI Vision (Fast)*.
- Recent scan quick-preview thumbnail card at the bottom.

Screen 2: Review Queue

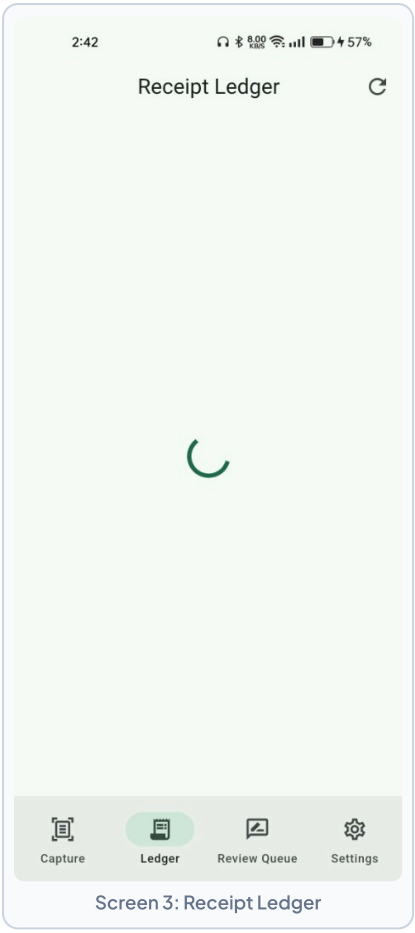

2. Review Queue Screen (Human-in-the-Loop)

What's Wrong Currently:

- A terrifying technical error message is dumped in raw red text when timeout occurs: *TimeoutException after 0:00:10.000000.*
- No side-by-side verification; items are crammed into a raw list.

Redesign Wishlist:

- Verification Card pairing a cropped snippet of physical receipt paper with editable candidate text fields (Item Name, Qty, Price).
- Confidence pill indicator (e.g. *74% Match - Check Price*).
- One-tap solid green [Confirm] and outlined [Edit] buttons.
- Friendly error state replacing raw technical dumps with an illustrative card and a simple [Retry Connection] button.

Screen 3: Receipt Ledger

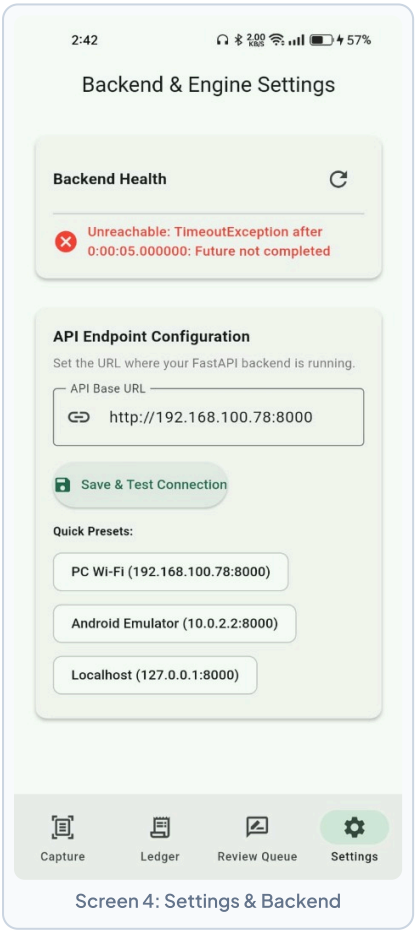

3. Ledger & Spending Intelligence Screen

What's Wrong Currently:

- A blank screen with a solitary spinning circle.
- No monthly selector, no category pills, and no item search bar.

Redesign Wishlist:

- Monthly Spend Total banner (e.g., *Rs. 42,850* with month picker dropdown).
- Horizontal filter pills for categories (*All, Groceries, Pharmacy, Snacks, Utilities*).
- Clean receipt row cards (Merchant name, Date, Item Count, Total Price).
- Minimal search bar to instantly find items (e.g., 'Atta', 'Panadol').

Screen 4: Settings & Backend

4. Backend & Engine Settings Screen

What's Wrong Currently:

- Looks like a developer debug screen with raw IP addresses, red timeout exceptions, and raw inputs.

Redesign Wishlist:

- Clean status dot: Green *Connected to Gemini Vision* or Amber *Offline Mode*.
- Clean toggle pills for presets: [Local PC Wi-Fi | Cloud Backend | Demo Mode].
- Overview stats card: Total receipts saved, total spend recorded, and storage usage.

4. Multiple Theming Options (Including High-Contrast B&W)

Theme Name	Background	Primary Accent	Text / Details	Vibe & Mood
Stark Black & White	#FFFFFF (Pure White)	#000000 (Solid Pitch Black)	#000000 (1.5px Black Borders)	Editorial, Swiss minimal, high contrast, zero distractions.
OLED Pitch Dark	#000000 (True Black)	#FFFFFF (Solid White Pills)	#E5E7EB (Crisp White Text)	Sleek, stealthy, battery-saving dark mode.
Modern Sage & Slate	#F9FAF9 (Soft Clean Paper)	#1E4D38 (Deep Forest Sage)	#111827 (Charcoal Slate)	Fresh, calm, organized, market & grocery feel.
Contrast Navy & Amber	#F4F6F8 (Cool Parchment)	#0F172A (Midnight Navy)	#F59E0B (Safety Amber Pop)	Sharp, high clarity, trustworthy modern fintech feel.

5. Micro-Interactions & Feedback Toasts

- **Success Toast:** Solid green pill + *"Receipt processed! 5 items added to Groceries."*
- **Error Toast:** Solid red pill + *"Connection timed out. Saved locally for offline sync."* with a flat *[Retry]* tap target.
- **Warning Toast:** Solid amber pill + *"2 items need confirmation in Review Queue."*
- **Skeleton Shimmers:** Smooth pulsing bone rectangles while loading instead of blank spinning wheels.

6. Ready-to-Use Google Stitch Prompts

Copy and paste these exact prompts directly into Google Stitch:

```
# Prompt 1: Homescreen App Icon
Design a modern, minimalist mobile application icon for "ReceiptLedger", an expense tracker for paper
receipts.
Style: Playful, casual, friendly, approachably modern.
Visual motif: A clean, stylized paper receipt slip with a subtle smile fold or geometric notch.
Strict constraints: Completely flat vector, ZERO gradients, ZERO 3D glossy effects, solid colors only.
Palette: Crisp white background, solid deep black line art, and a single accent pop of warm amber or sage
green.
Needs high contrast, instantly memorable on an iPhone or Android homescreen.
```

```
# Prompt 2: Secret Profile Drawer (Sidebar)
Design a sleek, functional mobile slide-out drawer (sidebar) for a receipt ledger app.
Trigger: Slides out when tapping the circular profile avatar in the top app bar.
Contents:
- Top: Circular user photo, name "Asad Khan", email "user@receiptledger.com", and a small "Pro Ledger" tag.
- Menu items with clean outline icons: Profile Settings, Export Data (CSV/PDF), App Licenses & About.
- Theme Switcher: A clean 3-way flat pill switch for [Light | Dark | B&W].
- Bottom: Distinct Logout button with clean flat red outline.
Aesthetic: Minimalist, clean flat cards, zero gradients, zero glass blur.
```

```
# Prompt 3: High-Contrast Black & White Mobile Redesign
Redesign a receipt scanner mobile application in high-contrast stark black and white aesthetic.
Inspired by minimalist Swiss editorial design and Japanese stationery.
Screens to show:
1. Receipt Capture View: Clean camera viewfinder with corner alignment marks, pill toggle for [Single |
Batch], and a solid black shutter button.
2. Review Queue: A card displaying a cropped photo snippet of receipt text, paired with editable candidate
text fields for item name and price, with solid black [Confirm] button and outline [Edit] button.
3. Floating Toast: A clean black pill banner showing "Receipt saved to ledger (PKR 2,400)".
Strict rules: 100% flat vector, zero gradients, zero shadows, zero liquid glass. Crisp 1.5px black borders.
```
